

Kosmos Bladder – AI-enabled simplicity

The Kosmos Bladder is a next-generation bladder volume scanner developed by EchoNous, designed to enhance accuracy and reliability in medical imaging. Powered by advanced AI technology, it provides precise bladder volume measurements, detecting volumes from as low as 4mL to over 1400mL. With an accuracy of ± 3 mL for volumes under 100 mL and $\pm 3\%$ for volumes over 100 mL, it significantly reduces errors compared to traditional scanners.

The device isolates bladder anatomy, ensuring only the true bladder fluid is measured, which minimises inaccuracies caused by other abdominal fluids. Kosmos Bladder is versatile, serving as a dedicated bladder scanner or an all-in-one point-of-care ultrasound (POCUS) device for vascular access and other applications. Its durable, military-grade construction and 5-year warranty make it a reliable choice for demanding healthcare environments. This innovative tool empowers clinicians with confidence in diagnostics, optimising patient care and streamlining workflows.

MORE THAN JUST A BLADDER SCANNER

Expand Kosmos Bladder into a comprehensive Point-of-Care Ultrasound solution, with an intuitive interface and AI-driven technology, capable of replacing three separate systems. Offering bladder, vascular access, and multiple POCUS

applications, Kosmos Bladder delivers an efficient, versatile medical imaging tool designed to empower healthcare professionals with accurate, reliable diagnostic capabilities.

Kosmos Torso-One Heart | Lungs | Abdomen Bladder

Experience comprehensive, whole-torso imaging with our sleek, small footprint Torso-one probe, featuring advanced Doppler capabilities, AI integration, and automated presets – all backed by a 5-year warranty.

Kosmos Lexsa MSK | Nerve | Vascular Lung

Acquire exceptional MSK, vascular, nerve, and lung imaging with the Lexsa probe's powerful 38mm linear array technology and precision channel processing, featuring advanced, real-time Doppler capabilities and backed by a 5-year warranty.

On the Stand Tablet security

Maximise the efficiency of your patient care while keeping your equipment secure and all in one place.

Portable Fully detachable monitor for bedside flexibility

Accessible, and convenient configuration options, designed to fit with your existing workflow.
